

# Fair Access Research

Enabling research to be accessible to all

## Meet the team:

Why do you have the same eye colour as your father? How do you get your hair colour? How do you get your height?

Genes are the instructions that tell your body how to make proteins. Proteins are the building blocks of your body and they do most of the work. Genes are passed on from your parents to you. You get half of your genes from your mother and half from your father. This is why you look like a mix of your parents.

Genes are like recipes. They tell your body how to make proteins. Proteins are like ingredients. They are used to build your body and do most of the work. Genes are passed on from your parents to you. You get half of your genes from your mother and half from your father. This is why you look like a mix of your parents.
